AMENDMENTS TO THE SPECIFICATION:

Please amend the specification by replacement paragraph(s) as follows.

[0025.5] FIG. 18 is a pictorial view of a light panel according a further embodiment of the invention, showing a mask with alphanumeric characters.

[0027] The edging strip 1020 is arranged to overlap the diffuser sheet 1030 and the backing sheet 1010 by a distance 'd', which in a non-limiting example may be 0.375 inches, and an inner surface 1070 of edging strip 1020 is angled downwards by an angle 'a'. Angle 'a' is preferably in the range 10-15°, preferably substantially 12°, i.e. angle 'b' would be substantially 78°, such that light from point light sources 1040 is reflected from mirrored surface 1060 of back sheet 1010 towards diffuser sheet 1030. As the point light sources 1040 are arranged to emit light normal to the inner surface 1070, the angle of incidence of the light with respect to the mirrored surface 1060 of the backing sheet 1010 is also equal to the angle 'a'. The diffuser sheet 1030 may be covered by a further sheet acting as a mask (not shown 1830 in FIG. 18), which does not permit the passage of light except through selective openings 1850, such as cut out numerals and/or letters, for example to display a house number or other message. In an alternative embodiment, the light panel may be used as a picture frame and the mask may be the mat used in framing the picture. This results in an appealing backlighting effect.
